„Köztéka" - Application for library and databank network

Cooperation of libraries became very important nowadays. Especially the physically separated but for some other points of view (collection, organization, financial resources, territorial closeness) joined libraries have to create their own networks for coordinating their services, customer support, acquisition policy and organizational behavior. These projects should be supported by the integrated library automation systems. The by the MTA SZTAKI developed and distributed and on the "Kistéka " integrated library automation software based "Köztéka" application is one of the solutions especially constructed and produced for all kinds of library networks, and it is particularly suitable for supporting web OPAC and portal services of library networks of local regions.
