

MYNTCD (MY NETWORK TRAFFIC COUNTER DAEMON) - TRAFFIC MEASURING AT GEORGIKON FACULTY OF UNIVERSITY VESZPREM

*Tamás Pintér, pinter@georgikon.hu
Georgikon Faculty of University Veszprem*

I would like to introduce the Myntcd program, which helps us to trace the network traffic in our faculty. It helps us to watch and parse the generated ip, tcp, udp, icmp traffic (eg. the size and the sum of the packets). The unwanted traffic can be denied, and the machines generating these traffic can be filtered out from accessing the public network. The programs official web site is <http://opnproject.hu/myntcd>.
