ABSTRACT:

INSTALLATION OF THE WIRELESS NETWORK IN NSZL

We have installed the Reader's Professional Workstation (OPM) system in 2004. The next step of developing our services is the installation of WiFi. We set up 11 Access points. We authenticate the users from the existing domain. The users can use the network with any network setting. The log files are made by the Access Controller. We created a separate VLAN with strict rules. During the presentation I explain the equipments and settings we use. Now we have experiences with the access points and the clients.
