

## CISCO-HUAWEI HETEROGENOUS NETWORKS

*Sándor Madaras, [madaras.sandor@synergon.hu](mailto:madaras.sandor@synergon.hu)  
Synergon Informatika Rt.*

A working network will be presented that will show you the formation of the architecture, the test process and the changing of the system on the score of the test results. It will be answered how to get around of the compatibility deficiencies and to operate and to maintenance a heterogenous network. It will be presented the configuration commands as specific examples distinguished by vendors and the Spanning Tree Protocol: RSTP and MSTP.

It will be presented how many networking solutions exist which provides an alternative solution instead of not interoperable protocol implementations.
