Cisco Systems Hungary*

In March Cisco announced the Cisco Unified Communications System, an integrated, comprehensive business communications solution that includes over 30 new products, enhanced management and administration, and simplified packaging to extend Cisco's solutions for the business voice market.

The Cisco Unified Communications System includes both new products and enhanced versions of existing products, of which CallManager 5.0 is the most exciting.

Line-side Session Initiation Protocol (SIP) support is built into Cisco CallManager 5.0, CallManager Express and selected IP endpoints. CallManager 5.0 also features integrated support for presence-based applications and, will include integrations with other presence-based applications and clients. Call Manager 5.0 is available as a Linux-based appliance, enabling simplified installation and upgrades.
