

ABSTRACT:

NEPTUN.NET LMS 3.0

The integrated, standardized, easy-to-use e-Learning solution

The creator of Hungary's market leading higher education administration system, the SDA Stúdió Ltd. prepared its new module, the Neptun.Net LMS 3.0 in order to give the possibility to a growing number of people to get acquainted with the advantages of e-Learning. The Neptun.Net Unified Education System includes this module which means that nationwide 34 higher education institutions already have the chance to reform their traditional and distant courses.

In the presentation we are going to show the functions that are included in the Neptun.Net LMS 3.0 and also the possibilities it has for the higher education institutions. With the use of this module, the universities and colleges can get a comprehensive LMS without any extra infrastructural investments required and they can easily fit the electronic learning material into their already existing training structure in order to supplement it, but also it is similarly easy to launch purely e-Learning courses and they can handle the connected finances in the Neptun.Net as well. Because of this, organizing a paid course will turn much easier and more transparent.

During the development of the Neptun.Net LMS 3.0 apart from usability concerns we focused on preparing the module in a way that it fits the international standards, thus Neptun.Net LMS 3.0 had become the first LMS in the continental Europe that received both the well-known SCORM 1.2 and the SCORM 2004 certificates from the Advanced Distributed Learning organization. On the presentation we will show the advantages of standardization and the results we have achieved so far with it.
