SDA Stúdió Kft.*

The SDA Stúdió Ltd. would like to make communication and cooperation among higher education students and teachers much easier and fluent. Our aim is to give these people the chance to utilize the advantages of modern cooperation and communication based on IT.

The simple, easy-to-handle screens of the Neptun Collaboration Space and its diversified functionality have one goal: to unify, unburden and drain the flow of information and the collaboration between the different actors in the higher education into one channel. As the Collaboration Space is integrated with the Neptun.Net Unified Education System thus for the students and teachers the different virtual spaces and the rights are generated based upon the educational structure of the institution, minimizing this way the required human administration.

On the presentation we are going to show the audience the functions and the advantages of the Neptun Collaboration Space and the way these could help the life of those in the education sector. The functions that will be discussed on the conference are the following:

- Bulletin board
- Virtual spaces
- Document collection
- The announcing, the delivery and the evaluation of mid-term tasks
- Schedule
- Forum
- Notifications
