

Standard technological solutions in the museum - introduction of a new informatics system in the Petőfi Literary Museum

The electronic processing, management and publication of the museum collections, in the same way of the librarian practice, need to move towards standard solutions in the description of documents as well as using the different forms of data swappings and making possible the common polling.

The lecture sums shortly up the national and international standards and integrating prescriptions. It looks up the common points of the standard solutions with the district of librarianship, and refers to differences.

There's demonstrated a potential standard achievement through the application of the integrated system in the Petőfi Literary Museum in this lecture.
