This lecture aims giving a review of recent developments of the NIIF videoconference service. We will introduce a new, centrally supported videoconference recording and streaming service implemented in the framework of the KFIIF national application. Experiences and result of NIIF's application titled as "Regular videoconference supported distant education" will also be covered. We will introduce High Definition (HD) videoconference state-of-the-art and related plans of NIIF Institute. At last, participation in international projects and cooperations will be introduced.
