

Tutamen et Simplicitas: Eduroam

*János Mohácsi, mohacsi@nif.hu
NIF Institute*

The number of mobile devices and laptops within academia has increased significantly over the last couple of years and users expect to be able to get connectivity everywhere, at home, on the road and at educational institutions. At the same time however, the security of wireless LANs becomes more and more important.

In the last year NIF piloted a project based on the international experience to look at a simple solution for national roaming with a requirements WLAN security and secure Internet access at academic campuses across Hungary and with international cooperation eventually in Europe. The proposed solution was tested and proved to be very successful with more and more institutions joining it.

In the presentation, we are presenting the Eduroam service model available for the Academic community in Hungary and also in Europe.
