Abstract

INDIGO - THE WORK PROCESS OF A DIGITAL COLLECTION

Pásztor Gyula, paszgyu@yahoo.com

One of the most significant difficulties of institutions dealing with digitisation besides the storage and retrieval of documents is the registration and handling/managing of work process in which the raw material/documents are turned into an archiveable and serviceable product that perfectly fulfils the users' demands.

The Department of the Hungarian Electronic Library has recently been working on a work process handling system aiming to support this process according to recent practice. The presentation not only shows conceptual inaccuracy, the question of picture- and metadata but also demonstrates the work process of digital documents.
