IT experts working in higher education must cope with a significant challenge: a heterogenous and separated IT environment and the lack of human resource needed for its management, which forces them to turn less attention to specific issues, including virus and spam filtering.

During the presentation, the following issues will be covered:

- I Introduction
- I The increasing importance of protection against malware and spam
- I Problems, which we may encounter during the implementation of security systems in a higher educational institution.
- I The possible solutions and the dangers they are capable of preventing in the IT system of higher education institutions
- I Problems arising after the implementation of various security systems and their possible solutions.
